Weather Activity Day

This cloud mobile and decorated hot air balloon were items made for fun. They both related to the weather being researched.

These items were made for the presentation at the end of the day. The barometer was a large representation of the real thing. It was used to explain to the rest of the pupils what a barometer is.

The rainbow was made by the youngest pupils. It was the full width of the stage!

Y1

These photographs show the children giving a pretend weather forecast for their location. They researched the data and chose the weather symbols that they would need. Each year group had symbols that were suitable for their age. The map printouts were provided by the organiser.

These are examples of the working weather instruments made by the children. Top left is a wind measurer, top right is a barometer and bottom left is a rain gauge.
