

Where the sun shines in my yard

- This activity could help you to decide where to put a weather station.

Use the map below to record where shadows fall in your area. Use a tape measure to get accurate lengths, don't forget to note down the time you measured.

You could use a different colour for each reading. (Colour in the boxes in the first column below to be your key.)

Tick the box if the sun is shining on the wall

	North Wall	East Wall	South Wall	West Wall
Early morning				
Midday				
Late afternoon				

Where should the door of your weather station go so that the sun does not shine on it? If you need some hints look on the 'Setting up Your Weather Station' page at <http://www.weatherforschools.me.uk/html/settingup.html>
